Our focus in the **Industrial Sector** is on the development and delivery of engineering, procurement and construction projects. Our key point of difference is our ability to offer an integrated service delivered by our **Industrial Corporate Clients Group**. This multi disciplinary group is highly skilled with a proven track record in designing large-scale complex manufacturing facilities.

Bovis Lend Lease CEMEA is a specialist in managing the design and construction of industrial projects with an exemplary global track record in this sector.

The opportunity to add real value in most, if not all, projects arises in the early pre-construction stages, where clients are defining their briefs and translating these into concept designs.

In Bovis Lend Lease CEMEA we have our own **design capability** for the **Industrial Sector**. Our design group is part of the **Industrial Corporate Clients Group**. The goal of the ICCG is to offer single point responsibility to Blue Chip manufacturing clients from initial feasibility, through to Engineering, Construction Management and Commissioning.

The ICCG provide a full spectrum of project delivery services, ranging from Technical Due Diligence and Front End Engineering Design Studies, through to full **Engineering, Procurement and Construction Management (EPCM)** services.

The sphere of our industrial experience encompasses all major sectors – from building materials, automotive, logistics and food and beverage industries through to general manufacturing facilities with a strong commitment to Health and Safety and the Environment.

Some of our recent projects include: [Delin Logistics](#), a class A Logistics Centre near Kiev in Ukraine; [Placo Vaujourns](#) (France), the largest plasterboard manufacturing facility in Europe for [Saint Gobain Gypsum](#) and a new plasterboard manufacturing facility, also for [Saint Gobain Gypsum](#), in UFA (Russia).
